FULL-STACK DEVELOPER | TYPESCRIPT, PHP, REACT, VUE | APIs, INTEGRATIONS AND CLOUD

SUMMARY

Full-stack developer and SAIT Software Development graduate (GPA 3.5) who builds tested web applications from client requirements to production. Delivered sign-in, permissions, document storage and subscription billing for a client on a 5-person team, and learned Laravel and Vue from scratch to ship a live payment reconciliation app in 6 days. Comfortable working directly with clients and non-technical users. Based in Calgary and eligible to work in Canada.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, PHP, Python, SQL, C#, Java, HTML, CSS
Frameworks: React, Next.js, Node.js, Laravel, Vue 3, React Native, Expo, Tailwind CSS
Data: PostgreSQL, MySQL, Prisma, Supabase, Firestore, Azure Cosmos DB
APIs and Integrations: REST APIs, webhooks with signature verification and idempotency, Stripe, Clerk, Gemini API, rate limiting, queued background jobs
Cloud and DevOps: Docker, Git, GitHub Actions, GitLab CI/CD, Google Cloud Run and Cloud SQL, Microsoft Azure, Cloudflare R2, Vercel
Testing and Tools: PHPUnit, Vitest, integration tests against real databases, test cases from requirements, Microsoft 365, Linux, WSL2, PowerShell

EXPERIENCE

Full-Stack Developer (Client Contract) | BAETT May 2026 - Aug 2026
Calgary, AB | 5-person team through SAIT's industry capstone program | Under NDA

- Delivered 4 client features end to end (sign-in and user roles, user and organization sync, document storage, subscription billing) by meeting the client twice a week for 4 months and turning their requirements into tasks.
- Kept each client organization's data separate across 3 permission levels by integrating a hosted sign-in provider, syncing user and organization records, and enforcing role-based access checks on the server.
- Shipped versioned document uploads across 6 tasks by gating every merge on 34 automated tests in CI.
- Automated subscription activation across 2 plans by building plan-based checkout, a signed webhook that activates each new subscription, and usage limits enforced per plan.
- Wrote and ran 13 of the team's 52 test cases (25%) for sign-in and access control, reporting defects by severity and priority.

Barista | Good Earth Coffeehouse, Calgary Nov 2025 - Present

- Served 100 to 200 customers per shift, handled payments on the point-of-sale system, and trained 3 new team members.

PROJECTS

PAYOUT RECONCILER (Personal Project) | PHP, Laravel, Vue 3, MySQL, GitLab CI/CD, Google Cloud Run Oct 2026
Live demo: payout-reconciler-221041446777.us-central1.run.app | Repo: gitlab.com/Manpreet445/payout-reconciler

- Automated payout reconciliation for payment merchants, giving every card batch 1 of 6 statuses with a plain-English reason, by building a matching engine that handles gross and net payouts, explains refund and chargeback gaps, and exports balanced journals for Xero and QuickBooks.
- Prevented double-processing across up to 8 deliveries of the same webhook by verifying HMAC-SHA256 signatures, rejecting replays older than 5 minutes, and enforcing idempotency with a unique database key.
- Learned Laravel and Vue from scratch and shipped in 6 days, with about 100 automated tests gating a GitLab CI/CD pipeline that deploys to Google Cloud Run in about 4 minutes.

AUTOMATED CONVEYOR SORTING SYSTEM | Cloud and Data Lead, Microsoft Azure Aug 2026

- Led the cloud and data side of a 2-person project, designing the Azure Functions and Cosmos DB backend that turned live Raspberry Pi sensor events into sort decisions, and presented it to industry guests at SAIT's showcase.

RECEPIE | AI meal planning web app | Next.js, TypeScript, Supabase, Gemini API, Zod, Vitest 2026
Live: recepie-app-gilt.vercel.app | Repo: github.com/Manpreet445/Recepie

- Kept AI meal planning working when the Gemini API fails by enforcing JSON schemas with Zod, retrying, and falling back to other models, with Vitest tests for ingredient matching and nutrition calculations.

EDUCATION

Software Development Diploma | Southern Alberta Institute of Technology (SAIT) Jan 2025 - Aug 2026
GPA 3.5 / 4.0 | Coursework: Security for Software Developers, Emerging Trends in Software Development | Training: Microsoft Learn, Blazor Hybrid and .NET MAUI
